**Interpretation:** Combined Parentage Index **1,448,975** Probability of Parentage **99.9999%**  
 The alleged father, XXXXX, cannot be excluded as the biological father of the child named XXXXX. Based on testing results obtained from analyses of 15 different DNA probes, the probability of paternity is 99.9999%. This probability of paternity is calculated by comparing to an untested, unrelated man of the North American Black population (assumes prior probability equals .50). This DNA Parentage Test excluded greater than 99.99% of the male population from the possibility of being the biological father of the tested child.  
 COURT/ADMIN Case No.: Report Date **5/23/2005**

Subscribed and sworn before me on 5/25/2005.

I, Elizabeth Panke, M.D., Ph.D., verify that the interpretation of results is correct as reported, and the above testing was conducted in accordance with the recommended guidelines for DNA testing set forth by AABB.
